2011 *WORKS!*

Energy from Waste

By

Sam Sunderraj, P.E., M.S.
Chief, Solid Waste Landfills Unit
Solid Waste Permits Section
Bureau of Waste Management
Kansas Department of Health & Environment

The Vision

- Identify the sources of organic wastes and identify management options
 - Wood waste, manure, packing plant wastes, food wastes etc..
- Enhance Waste Stabilization in Subtitle D Landfills
 - Decompose the waste mass as quickly as possible.
 - Maximize the use of disposal capacity in landfills
 - Generate methane quicker and in larger quantities to facilitate beneficial use options
 - Minimize post-closure maintenance and monitoring
 - Maximize options for post-closure use

What are the means we have to make that vision a reality

- Outreach
 - To encourage beneficial use of landfill gas
 - To encourage organic waste to energy in other forms
- Research authorized by regulation (RD&D)
 - Liquids addition in Subtitle D landfills
- Streamline processing of regulatory approvals needed.

But what does it really take

- Perseverance in pursuing possibilities you perceive
- Partnership between different entities, local governments, industries, consultants
- Patience in forging those partnerships
- and the Vision to implement best management practices

Key themes/ideas

- Is your project going to be recognized by an EPA LMOP award?
- Is your project managing 20 cfm beneficially?
- Is your project managing wood wastes to ensure the health of our forests?
- Fats, Oils and Greases – a problem or a rich potential?
- Anaerobic digesters/ Composting organics₆
